

EVALUATION GUIDE

How to Evaluate Sovereign Dispatch

A predictable path from first review to a production decision, designed to reduce procurement uncertainty. Every step can begin without contacting sales.

DOCUMENT	VERSION	AUDIENCE	DISTRIBUTION
Evaluation Guide	2026.06	Procurement & technical evaluation	Public — no NDA required

The evaluation path

- 01 Self-serve review.** Read the procurement dossier and architecture overview. Open the interactive lifecycle to see exactly what a governed publication involves.
- 02 Free evaluation environment.** Create an account and produce a record end to end. Evaluation records carry a clearly-marked EVAL- identifier and are never mistaken for official.
- 03 Technical review.** Assess architecture, security, identity, data residency and integration against your requirements.
- 04 Pilot deployment.** Run a scoped environment against real document types and approval policies.
- 05 Security & procurement review.** Confirm controls, residency, audit evidence and commercial terms.
- 06 Production rollout.** Phase the platform into operations.

What to test in a pilot

Your approval policies	Your roles
Sovereign Dispatch — Institutional Trust Infrastructure	dispatch.sovereigndo.com

Model a real document type and its chain of authority; confirm separation of duties is enforced.

Map your offices to author, reviewer, approver, publisher and auditor.

Publication & certificates

Publish a record; inspect its Record ID, Governance and Preservation certificates and evidence chain.

Independent verification

Verify a published record, then alter a copy and confirm the integrity check fails.

Integration

Exercise the API against an existing system (ERP, case or document management).

Residency & deployment

Confirm the deployment model and data-residency posture your mandate requires.

Evaluation checklist

- ✓ A document moves through its full governed lifecycle without bypassing governance.
- ✓ Approvals are attributable to named offices and bound to an exact version.
- ✓ Every published record carries a permanent Record ID and integrity hash.
- ✓ Governance and Preservation certificates are present and inspectable.
- ✓ The evidence chain is append-only and timestamped.
- ✓ A tampered copy fails verification; a genuine copy passes.
- ✓ Identity, SSO, residency and deployment satisfy your requirements.
- ✓ The API integrates with your existing systems.

Evaluation environments are watermarked. Records produced during evaluation use the EVAL-namespace and verify publicly as **not** official, so they can never be passed off as genuine institutional records.
